

Speaker 1 ([00:00](#)):

Jenny. We're coming to you Jenny.

Speaker 2 ([00:05](#)):

Good evening I know we have so many questions here, so I'm going to get right into mine, Dr. Nikolaos. And what I have here is, what is the significance of detoxifying and supporting our body's ability to detoxify on a daily basis? That's the key on a daily basis; not just 30 days or what, 60 Days.

Speaker 3 ([00:24](#)):

Correct! Thank you Jenny, very nice question. The significance is huge. First of all, I like the way you articulated (inaudible: technical difficulty) ability to detoxify by offering the zeolite to our body, we allow our body mechanisms to act. So we are helping our body, physiological mechanisms for detoxification. Now this needs to be done on a daily basis because the toxins accumulation occurs on a daily basis. So we need to reverse this process. That's why we need every time, every day we get toxins in our body. We must take them out. Ok. On a daily basis. And that's why all these protocols that is like a five days detox or 14 days detox. I'm asking a simple question. All right. Let's suppose that you did this protocol for 14 days of detox. What about day 15? What about the 16th day? What about the 17th day? What about the 29th day? What are you doing these days? So systemic daily reversal of the accumulation process. That's what clear drops offers.

Speaker 4 ([01:55](#)):

Perfect. That's an excellent answer. Daily systemic detox, truthfully solving a problem that no one can avoid. No one can avoid ... the toxins coming in through air food and water.

Speaker 3 ([02:10](#)):

That is no tight space. There's no closed space in our planet, even organic food. Okay, good. But let me please know what was the quality of the air that these organic food was using to become food in the ground? What was the water? You know, we have a Fukushima nuclear accident, and then you have radiation in fishes that are facing California, so there's no place that... Okay.

Speaker 4 ([02:43](#)):

Great point. Great point. And, you look at the number of people that are eating sushi. I mean, sushi is a big time food. I mean, every day just...

Speaker 3 ([02:53](#)):

Sushi is tasty, but it has many elements, it has mercury. Okay. We know that. There's no way Denise, there is no way that you can avoid the toxins accumulation. Nobody should blame themselves. Oh, I should have done that. This is nothing you can do. What are you going to do? Are you going to stop eating, stop drinking water, stop breathing? There's no way.
