

Speaker 1 ([00:00](#)):

Yeah, I see that now. Okay, we're going to put you on the spot. We know that you have other formulations in the pipeline and using the, this patented zeolite delivery system. So are there any plans to create a canine formulation or a pet formulation for detoxification purposes? Because pets are part of our lives, their family members. We want to help them as well.

Speaker 2 ([00:26](#)):

Of course. Very nice. Carl, thank you for asking for asking this. As you all know, we don't have a product. We have patented effective delivery system because zeolite can be loaded with other substances. So our second formulation clear sleep as safe and effective sleep aid is already in your hands. More to come. I'm not going to reveal anything tonight, but more to come. Of course we need to take care of our friends. And Carl, we have many things going on. We do have in our plans to create a detox product. First for our companion animal friends, dogs, and cats our Passion is about creating a detox product for larger animals and competition, animals, horses. And also we have in our mind, two formulations, one for companion animals in one for large animals, not in the detox domain, but something related to some serious support. Now, as you all know, you've heard so far at Metron Nutraceuticals. We operate as if we were a pharmaceutical company, we take small steps, but towards the same direction, we don't want to have setbacks. So we go very slowly and carefully. We're going to have, we will have very, good news to share with you towards this direction.

Speaker 3 ([02:23](#)):

You know, that's, that's one of the hopes that we hold onto here. At Zoe global, Dr. Nikolas, we know what we have our hands on. We know that I thought of this analogy the other day, and I nearly fell out of my chair. You know, we are clear drops, formula takes out the garbage, but our zeolite can also bring in the groceries. It can take out the groceries, take out the garbage or bring in the groceries. That's how powerful, what our zeolite is capable of doing.
